Make an informed choice about drugs like Tamiflu and Relenza. Side effects include convulsions, delirium, delusions and death.

January 21, 2012

### Make an Informed Choice Tamiflu & Flu Shots

Hello Everyone. As "Flu Season" Approaches the pharmaceutical companies, MD's and Pediatricians have stepped it up a notch and are once again pushing flu vaccines and antiviral medications like Tamiflu and Relenza. I encourage you to make an informed decision. Thoroughly educate yourself about the pros and cons of vaccines and antiviral drugs. What many don't know is getting these vaccines or taking antiviral drugs **does not** prevent you from getting sick & getting these vaccines or taking antiviral drugs **does not** shorten the time you will be sick as promised by the pharmaceutical companies.

In fact, according to Dr. Mercola, these vaccines and drugs can be more **dangerous** than actually getting the flu. Dr. Mercola states that documented research and actual cases have shown that the effects of Tamiflu on the brain caused convulsions, delirium and delusions in over 1,800 KIDS and 5 deaths in Japan. What is more concerning is many doctors and pediatricians are not aware of the dangers because the pharmaceutical companies have convinced them they are actually effective.

Further, the FDA recently approved using expired Tamiflu capsules to make an oral liquid version of the drug for children. It isn't about health. **It is about money.**

Despite known **adverse effects**, the pharmaceutical companies are still selling Tamiflu and the government has bought and stockpiled large quantities. In fact, they just introduced a new oral form of Tamiflu now available in 6mg/ML. This dose is smaller than previous doses of 12mg/ML. They reduced the dose because the higher doses

Make an informed choice about vaccines. Research the pros and cons, including what ingredients they contain. Understand the effects on you and your loved ones before making a decision to vaccinate. Here is the website link to the National Vaccine Information Center.

<http://www.nvic.org/>

Do your research before deciding to vaccinate your children. If you decide not to vaccinate and your child's school tells you they must be vaccinated; they have misunderstood the law.

You have a legal right to send your child to school even if they are not vaccinated. On the California School Immunization Record Form sign the personal belief affidavit waiver located on the second side of the form. This will exempt your child from vaccines.

Here is a link to an article about behavior problems in children that are vaccinated, by Dr. Viera Scheibnerova, PhD, researcher and retired micropaleontologist.

<http://www.whale.to/m/scheibner9.html>

Understand the pros and cons of vaccines, pharmaceutical drugs and antiviral medicines before making a decision to give them to you and your loved ones. The most vulnerable are children, seniors and those already sick. That is why it is important for you to do your research. Know the short and long term side effects. Find out who funded the research.

were **harmful!** If the higher doses were harmful, don't you think the accumulation of smaller doses would be harmful too?

**Who benefits?** The beneficiaries are the pharmaceutical companies, their stockholders and their board members. One such beneficiary includes Donald Rumsfeld, Secretary of Defense for the Bush administration. Rumsfeld sat on the board of directors for Gilead Sciences, the developer of Tamiflu, prior to his political position and has benefited handsomely from the sale of Tamiflu. Roche produces the drug and Genentech makes the oral version.

As "flu season" approaches, understand "flu season" doesn't exist. The idea was marketed by companies that stand to profit if you and your families take their drugs. And they stand to profit, even though, as demonstrated and stated by [Richard Gale and Gary Null, PhD](#), "Statistical studies show that no single vaccine and no combination of vaccines have been proven to be effective or safe for any given individual. In addition, we found that the vaccine process does not confer the protected immunization for a given individual. To the contrary, **vaccines actually compromise and adversely alter the body's immune system.**"

[Dr. Viera Scheibner, PhD](#) is one of the world's most respected scientists and scholars of vaccine medical data. She is the author of "Vaccination: 100 Years of Orthodox Research and Behavioral Problems in Children". According to experts, her investigations uncover how the vaccine industrial complex, and national and international agencies

who oversee vaccination policies continue to entertain a pseudo-science that is fraught with inconsistencies, poorly designed studies, erroneous interpretations, and conclusions that are patently false.

Further, [Gary Null, PhD](#), author of "[Flu Vaccines: Are They Effective and Safe?](#)" stated, "The central principle of democracy is **freedom of choice**. We can choose our political party or the food we eat, but this does not seem to be the case when it comes to our medical choices and our freedoms to make them. The underlying foundation upon which the entire vaccine program rests is that they have been proven to be safe and effective. So much so, that if people choose not to be vaccinated or take antiviral medications they are criticized for making irresponsible choices that will not only adversely affect themselves, but could also cause others - co-workers, family and classmates - to become infected with the pathogens their bodies

Often you will discover that those that stand to profit have paid universities or research firms to conduct favorable research on their products.
